

SYNC daemon start sequence

- Notes:
1. Restart daemon basically ends the process with returncode 0.
Can we configure system to restart immediately?
 2. On unexpected errors, we log and exit with returncode 1.
Daemon should restart with some backoff
 3. The WAIT states are related, we should use a single “tick time” to determine the absolute length of the wait.

ASYNC event handling (after daemon start sequence)
